

PA-GLASS

This material is made of nylon with a glass fibre charge and is excellent thanks to its rigidity and sliding properties. It also has a very high degree of heat resistance, in the short term even up to 150°C, in the long term up to 100°C

Fields of application:

A material which, thanks to its characteristics, can be used in many fields of application.

Print characteristics

Easy to print

Printing temperature - 230°C

Print bed – 0 °C

Bed adhesion - Hairspray

Recommended printing speed - 40 mm/s
