

PLA LAYER

A bio polymer with characteristics well above the standard Pla, it has mechanical and thermal properties similar to ABS. It is suitable for food contact. The layers' visibility is hidden excellently. It has a superior resistance to ageing. Excellent resistance to ultraviolet rays thus avoiding colour variations.

Fields of application:

A very versatile material which can be used in many fields of application, from automotive to design objects.

Print characteristics

Easy to print

Printing temperature - 220°C

Print bed – 50°C

Bed adhesion - PEI

Recommended printing speed - from 30 to 80 mm/s
